
(2) The between-paper offset is not composition-driven
composition = molecular descriptors + i-PrOH fraction + flow + estimated t₀;
stationary-phase identity is deliberately excluded
shares ≥ 10 % of the
between-paper variance
are excluded at 95 %
36.37 %
15.58 %
7.37 %
1.95 %
perfect recovery (y = x)
recovered (bar = one-sided 95 % t interval, 5 draws)
5 % share: not excluded
(interval reaches the observed value)
observed -1.58 %
share recovered by the same pipeline (%)
planted composition-driven share of the between-paper variance (%)
