pairwise Pearson r
one observation per (compound, condition)
column labels: <column><a = acidic | b = basic>
(b) What changes the ranking
compound-clustered bootstrap, 2000 resamples; bars = 95 % CI
both changed
r = +0.084 [−0.044, +0.180] n = 30
r = +0.128 [+0.001, +0.250] n = 30
selector only
(same mobile phase)
r = +0.560 [+0.274, +0.829] n = 6
mobile phase only
(same column)
−0.5
0.0
0.5
1.0
pairwise Pearson r
selector-only and both-changed overlap:
selector contribution not resolvable
